

American Express® vPayment with Conferma for hotel booking

vPayment gives you the control and reconciliation capabilities to support Clients who wish to manage and settle their hotel spend centrally

vPayment is already integrated into Conferma, enabling you to improve and automate reconciliation. It also optimises cashflow for all parties, and optionally tightens spend controls, with the convenience of rapid implementation into existing processes and systems.

Optional spend control

vPayment provides value controls on each transaction which:

- Limits exposure to incorrect hotel rates
- Limits exposure to abuse
- Ensures only the room rates are included on hotel stays, if required by the Company's expense policy

Improve and automate reconciliation

All payments have a unique reference ensuring they can be reconciled and allocated:

- Automatically generated by Conferma to your specifications
- Additional references enable more detailed analysis
- Conferma's transaction report shows the references, booking information and invoice information, matched to your American Express statement

Cashflow benefits

- Improved payment timelines can be offered to hotels without compromising existing cashflows
- vPayment accounts can be issued in the Client's name, releasing the TMC from the risk and resource of billing and collections
- Accounts in the Client's name mean that VAT invoices generated by the hotel can be used for VAT recovery, consistent with legislation changes in 2010

Convenient implementation

- No implementation for the hotel, they simply process a standard American Express transaction
- Accepted at the hotel under existing commercial arrangements
- vPayment is already integrated into Conferma, and so only needs to be configured to your own specific reconciliation and control requirements
